Skills

Programming Languages: Java, JavaScript (ES6+), SQL

Frontend Development: HTML5, CSS3, JavaScript, React.js, Next.js, Tailwind CSS, Bootstrap, Responsive Web Design

Backend Development: Node.js, Express.js, REST APIs, JWT Authentication, Socket.io

Databases: MongoDB, MySQL

Developer Tools: Git, GitHub, Postman, VS Code, Vercel, Render, NPM

Computer Science Fundamentals: Data Structures & Algorithms, Object-Oriented Programming (OOPs), Database Management Systems (DBMS), Operating Systems (OS), Computer Networks (CN)

Software Engineering: MVC Architecture, Client-Server Architecture, Authentication & Authorization, API Integration, Version Control, Software Development Life Cycle (SDLC)

Artificial Intelligence: Gemini AI, Prompt Engineering, AI-Powered Application Development

Education

Madhu Vachaspati Institute of Engineering and Technology, Prayagraj

2022 – 2026

Bachelor of Technology in Computer Science Engineering

CGPA: 7.4/10

Experience

MERN Stack Developer Intern | Softpro India, Lucknow

Sep 2024 – Nov 2024

- Developed responsive frontend interfaces using React.js and Tailwind CSS, applying component-based architecture and reusable UI patterns to build consistent and maintainable views across the application.
- Built and consumed RESTful APIs using Node.js and Express.js, handling routing, middleware, request validation and response formatting to enable structured client-server communication.
- Implemented JWT-based authentication from scratch including user registration, login, token generation, token verification middleware and role-based protected route handling.
- Designed MongoDB schemas with proper data types, references and validation rules; implemented CRUD operations with filtering, sorting and pagination for efficient data access.
- Used Git and GitHub for source code management throughout the project, working with branches, pull requests and commit history to maintain a clean and trackable codebase.

Projects

AI Customer Support SaaS Chatbot

Next.js, MongoDB, Gemini AI, ScaleKit, Tailwind CSS

GitHub Live

- Developed a SaaS platform that allows businesses to embed an AI-powered customer support chatbot on any website using a single script tag; chatbot uses Google Gemini AI to read business FAQs and automatically answer customer queries in real time
- Built secure user authentication using ScaleKit SSO, an admin dashboard where business owners can update their knowledge base and business details, and integrated MongoDB Atlas for persistent data storage
- Added voice chat feature where customers can speak their questions using microphone and AI replies back in voice using Web Speech API; deployed the complete application on Vercel

AI-Powered Hospital Management System

MERN, Socket.io, Gemini AI, Better Auth

GitHub Live

- A hospital management website with separate logins for admin, doctor, nurse, and patient. AI (Google Gemini) automatically assigns the best doctor and nurse to new patients, and also reads uploaded X-rays to give a report The app updates in real-time and has a billing system with online payments
- Built the frontend with React and backend with Node.js and Express. Used MongoDB for the database and Google Gemini AI for patient assignment and X-ray analysis. Used Socket.io for real-time updates and Inngest for smooth background processing
- Added a search and filter feature for quick access, dark and light mode for better comfort, made the entire app fully responsive, and deployed the project live on Vercel so it can be accessed and used in the real world

TradeVista

React.js, Node.js, Express.js, MongoDB

GitHub Live

- A complete stock trading website with a home page, an "About/Products/Pricing" section, a secure login and signup page, and a live trading dashboard where users can see stock prices, their holdings, orders, and account balance
- Used React.js to build the website pages frontend and Node.js with Express.js to build the backend server that handles login, signup, and stores sends data Used MongoDB as the database to save user accounts and trading information securely
- Designed a clean and modern UI/UX for the platform, ensuring the website is fully responsive across mobile, tablet, and desktop devices. Deployed the project live using Vercel, Render, and MongoDB Atlas, making it accessible on the internet
